ARTIFICIAL INTELLIGENCE.

Akeel Afreedi

INTRODUCTION

🤖 Artificial Intelligence (AI) is the ability of machines to think, learn, and make decisions like humans.

- ◆ AI enables computers and robots to perform tasks that usually require human intelligence.
- ◆ It is powered by data, algorithms, and computing power to solve problems.

💡 Example: AI helps Siri understand and answer your questions.

PLANNING TO USE AI FOR ASSIGNMENTS?

Londontec
City Campus

OUTCOME IS SIMPLE

You Might have to Repeat the Module

You Might have to Restudy the Module

You might have to fail the module

OR

You might even be withdrawn from the programme

IS ARTIFICIAL INTELLIGENCE BAD THEN?

NO

In this Developing world, understanding what AI is and Developing AI is essential for you tech geeks especially. AI development is a very important skill to aquire and understanding AI is essential for futurology and to survive in the developing world

HOW DOES AI WORK?

⚙️ AI works by analyzing large amounts of data and learning from patterns.

◆ Step 1: Data Collection – AI gathers data from text, images, videos, etc.

◆ Step 2: Learning Process – AI uses algorithms to understand and improve.

◆ Step 3: Decision Making – AI makes predictions or takes action.

📌 Example: AI recognizes cats 🐱 by analyzing thousands of cat pictures.

The
Cat

TYPES OF AI

01

Narrow AI (Weak AI) –

AI that specializes in one task (e.g., Google Search, ChatGPT).

02

General AI (Strong AI) –

AI that can think and learn like a human (not yet achieved).

03

Super AI –

AI that surpasses human intelligence (theoretical future AI).

04

කෙලවෙන AI -

AI that is used in assignments and education and being a victim of a knowledge weapon.

AI IN EVERYDAY LIFE

This Slide was generated using AI 🤖

💡 Where do we see AI?

- ✓ Virtual Assistants (Alexa, Siri)
- ✓ Smart Recommendations (Netflix, YouTube)
- ✓ Self-Driving Cars (Tesla, Waymo)
- ✓ AI in Healthcare (Disease detection)
- ✓ Chatbots & Customer Service (ChatGPT, AI support bots)

📌 AI is already part of our daily lives! 🚀

Londontec
City Campus

MACHINE LEARNING – A KEY AI CONCEPT

 Machine Learning (ML) is a type of AI that allows computers to learn from experience.

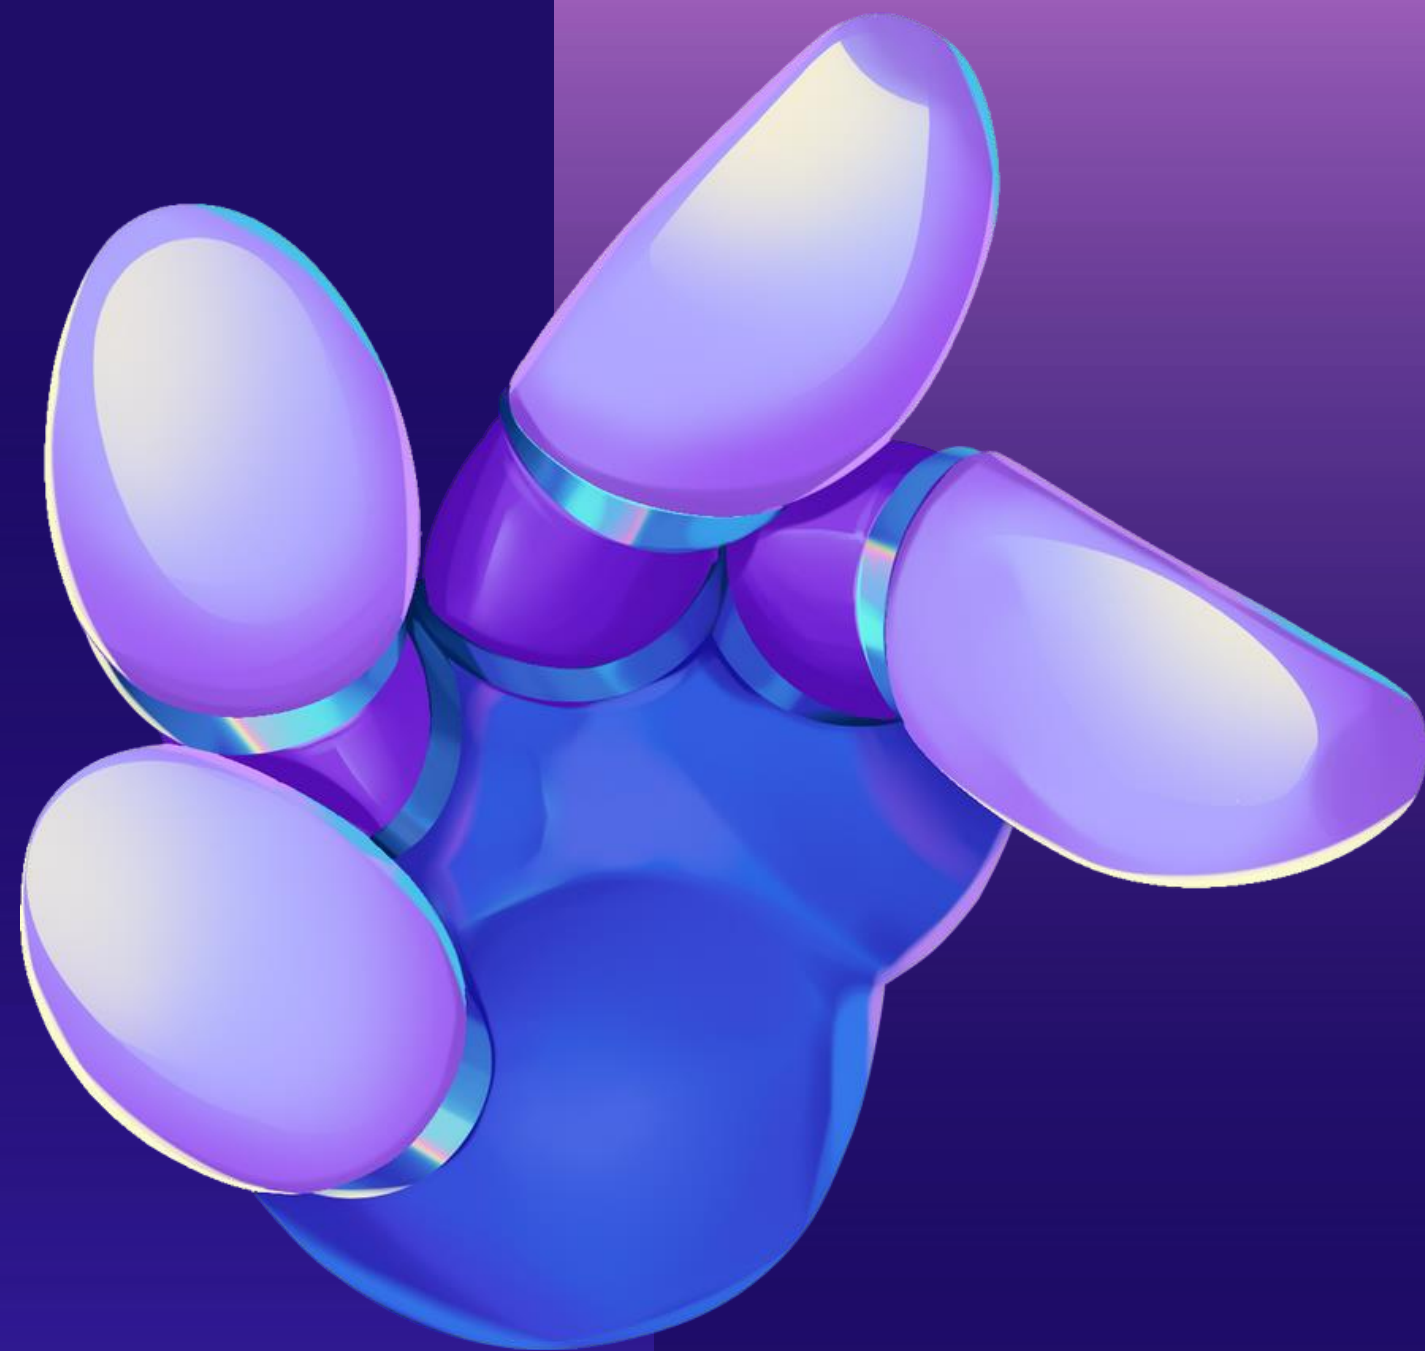

- ◆ AI doesn't need to be programmed for every task—it improves over time!

- ◆ ML is used in speech recognition, fraud detection, and even self-driving cars.

- 📌 Example: Netflix learns what you like and suggests new shows. 

...

FUTURE OF AI

WHAT'S NEXT?

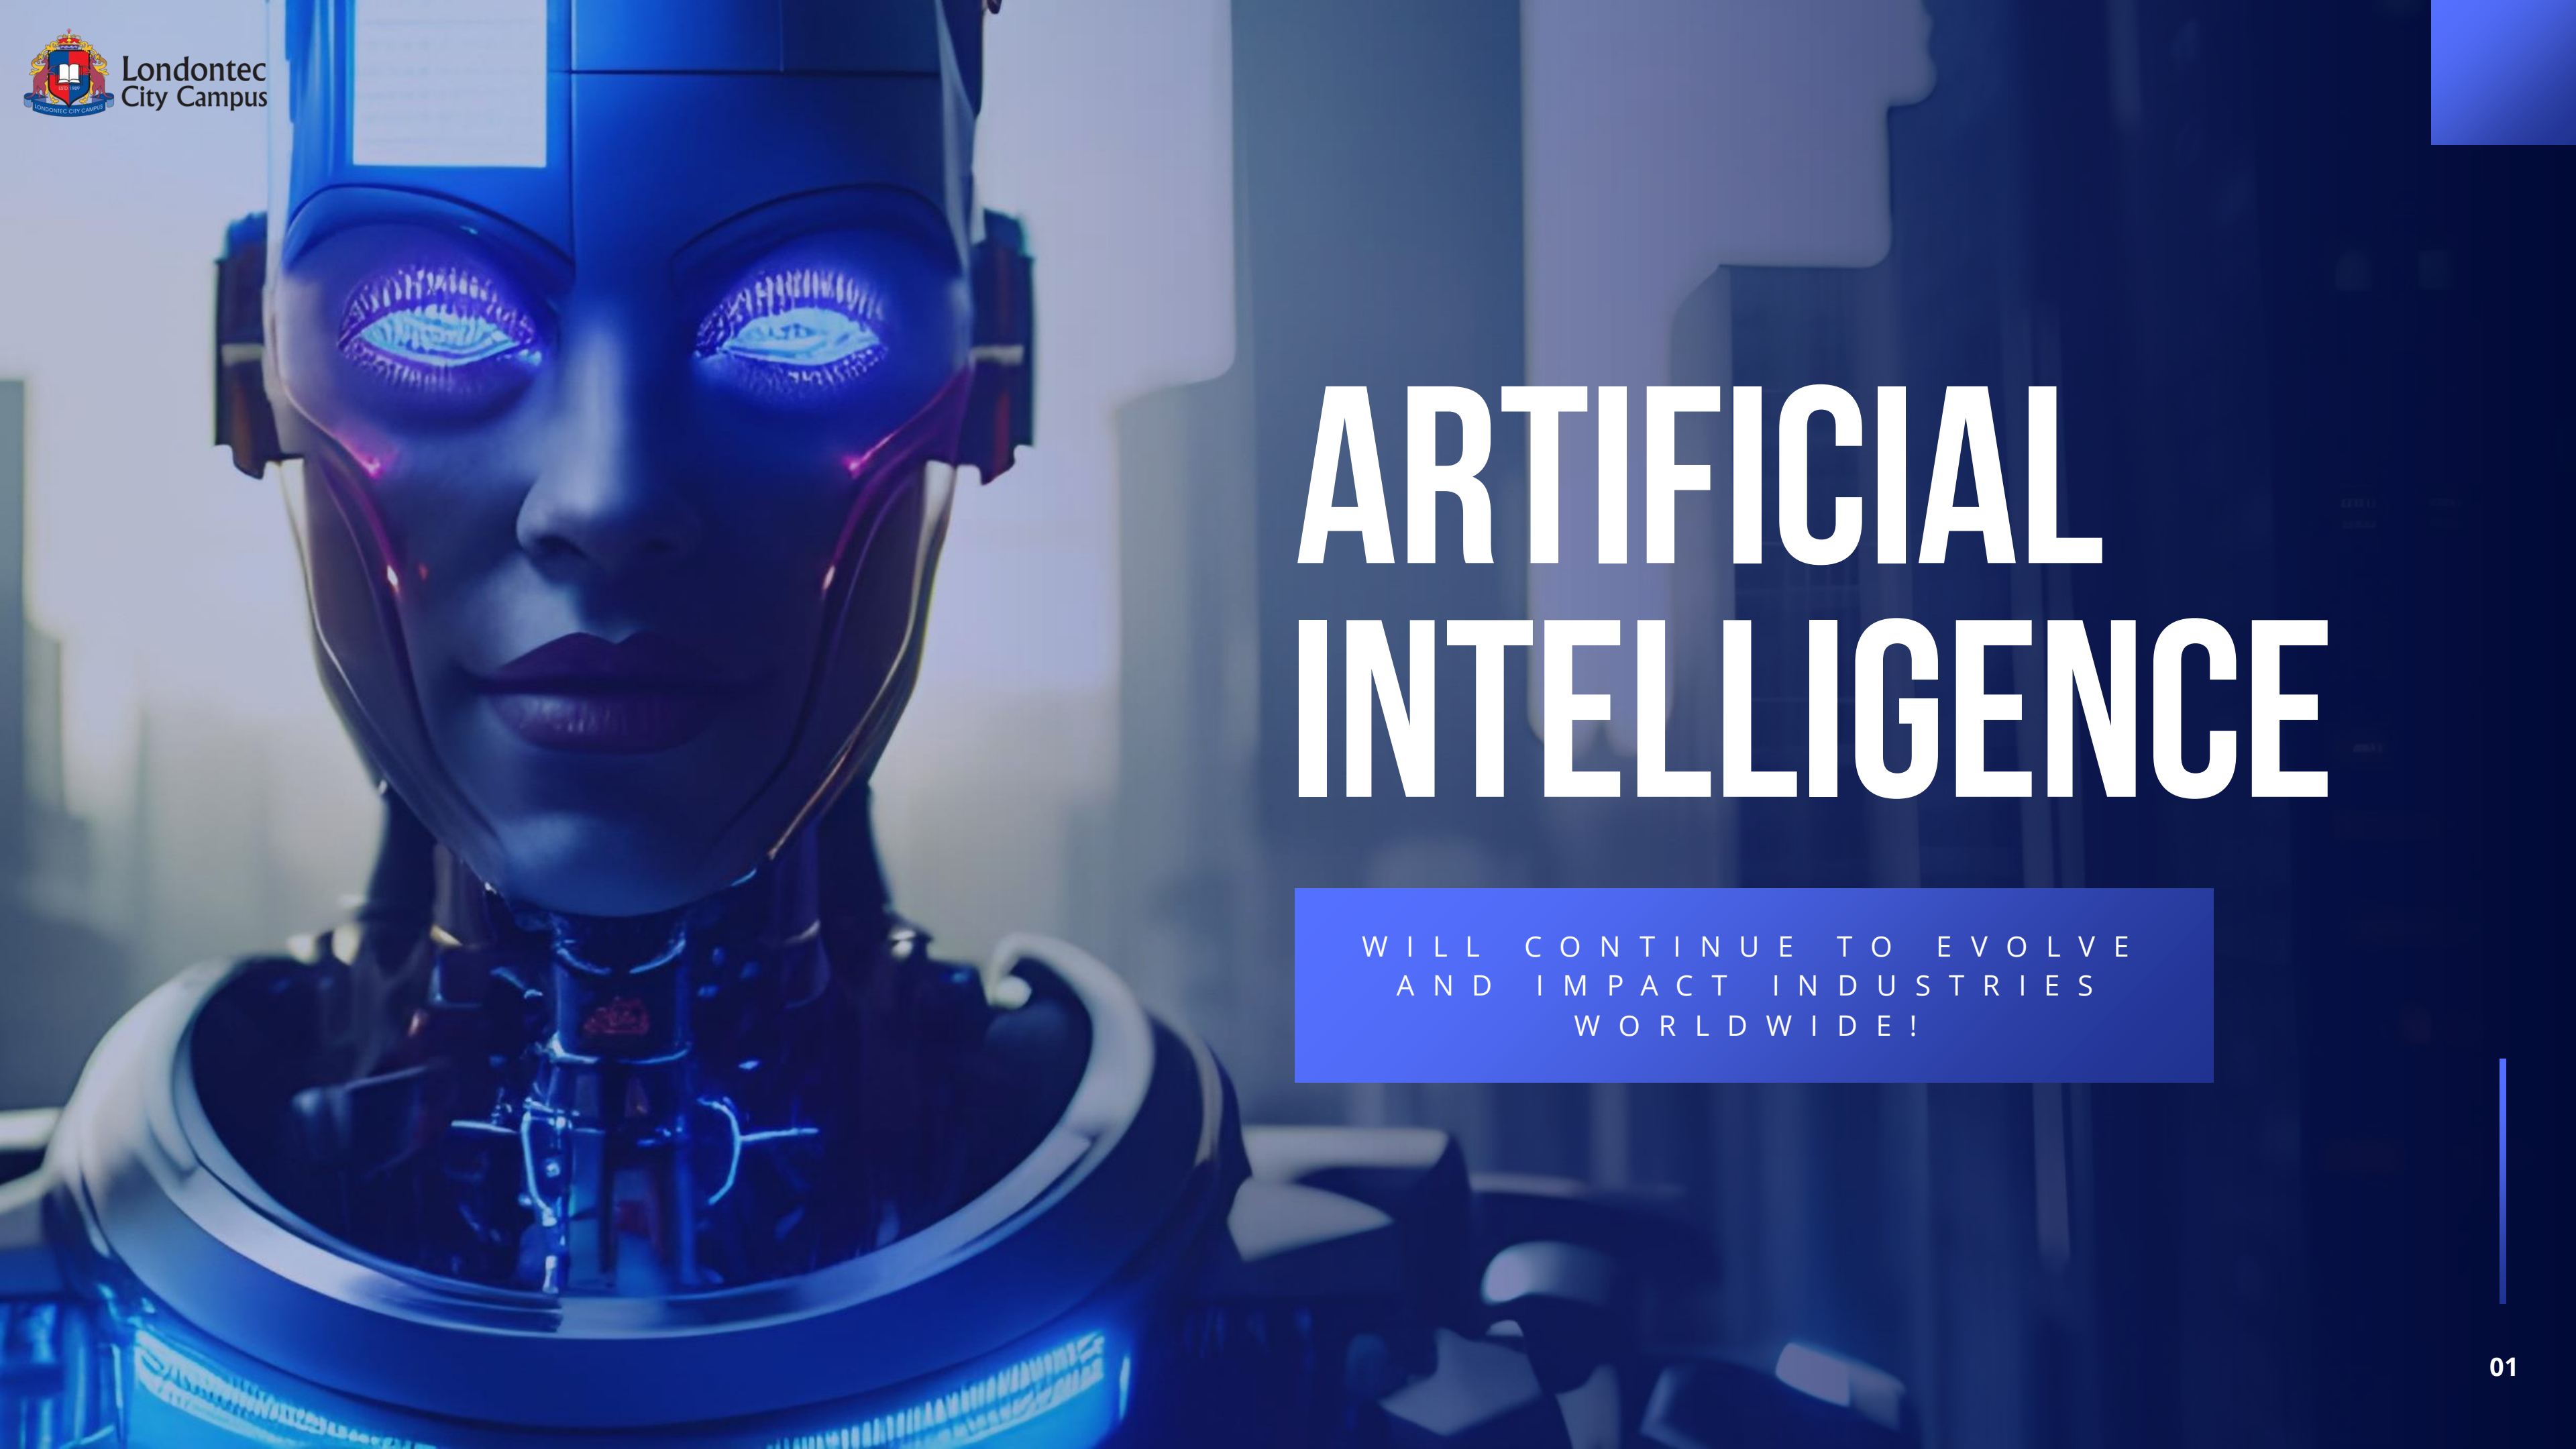

AI-POWERED ROBOTS & AUTOMATION

**AI IN EDUCATION & PERSONALIZED
LEARNING**

AI IN SPACE EXPLORATION

**ETHICAL AI – ENSURING AI IS FAIR AND
UNBIASED**

ARTIFICIAL INTELLIGENCE

WILL CONTINUE TO EVOLVE
AND IMPACT INDUSTRIES
WORLDWIDE!

SUMMARY – WHAT IS AI?

- AI is the ability of machines to think, learn, and make decisions.
- It is powered by data, algorithms, and computing.
- AI is already used in daily life and will continue to grow.
- The future of AI is exciting, but ethical challenges must be addressed.
